

Direct Circle

A mixture specifically designed for pasture renovation

Direct Circle is a mixture specifically designed for pasture renovation.

It can be established by slot seeding, or broadcasting and harrowing into the established sward.

Direct Circle is a mixture made up predominantly of hybrids and tetraploid ryegrasses. The larger, more aggressive species mean the mixture will establish well under a dense sward. In addition it can be slot seeded into a short-term ley to give the ley more “bottom” and also increase production of the ley for one to two more years.

For quantities of 30 or more acres, please contact us on 01472 371661

Strengths

- Aggressive growth
- Rapid establishment
- Vigorous species and varieties
- Erect growth coverage
- Persistent varieties
- Simplified weed control
