

Phacelia

Brilliant blue flowers which attracts a huge number of insects

Phacelia is a fast growing cover crop that is quick to establish.

Phacelia has beautiful blue flowers which attract a huge number of bees and other insects. Phacelia is beneficial to wildlife as it provides a source of pollen and nectar.

This species competes well with weeds due to its vigorous and dense growth, however, care should be taken in following crops as Phacelia can reseed itself very easily.

Phacelia works well in seed mixture, where it compliments other species and provides early pollen production enabling use by foraging bees.

Crop height: 30-60cm

Supplied in 5kg units

Phacelia is a 'Hibird' product: [Download Free Pdf](#)

Strengths

- Extremely fast growing catch crop
- Brilliant blue flowers attract huge numbers of insects
- Pollen and nectar provider
- Competes well with weeds
